It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not removed. SUBUNIT: Homodimer.
SUBCELLULAR LOCATION: Cytoplasmic.
SIMILARITY: Contains 1 ATP-grasp domain.
SIMILARITY: Contains 1 biotin carboxylation domain.
SIMILARITY: Contains 1 biotinyl-binding domain.
SIMILARITY: Contains 1 carboxyltransferase domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                FAS3 (acetyl-CoA carboxylame).";
DNA Seq. 4:69-70(1993).
-!- COFACTOR: Biotinn (By similarity).
-!- SIMILARITY: Contains 1 ATP-grasp domain.
-!- SIMILARITY: Contains 1 biotin carboxylation domain.
-!- SIMILARITY: Contains 1 biotinyl-binding domain.
-!- SIMILARITY: Contains 1 biotinyl-binding domain.
-!- SIMILARITY: Contains 1 biotinyl-binding domain.
-!- SIMILARITY: Contains 1 carboxyltransferase domain.
-!- CAUTION: The reading frame from which this protein in translated has no Met initiation codon near to the 5'end. It does not seem the a pseudogene. There are no apparent frameshifts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE=97313268 | AB972; MEDLINE=97313268 | PubMed=9169872; MEDLINE=97313268 | PubMed=9169872; MEDLINE=97313268 | PubMed=9169872; MEDLINE=97313268 | PubMed=9169872; Medles S., Chirlingworth T., Connor R., Deviln K., Gentles S., Hamlin N., Hunt S., Jagels K., Lye G., Moule S., Odell C., Pearson D., Rajandream M.A. Rice P., Skelton J., Walsh S.V., Whitchead S., Barrell B.G., The nucleotide sequence of Saccharomyces cerevisiae chromosome XIII."

This Swiss-Prot entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the BYBL outstation - the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not of long-chain fatty acids. This protein carries three functions: biotin carboxyl carrier protein, biotin carboxylase, and carboxyltransferase.

CATALYTIC ACTIVITY: ATP + acetyl-CoA + HCO(3)(-) = ADP + phosphate + malonyl-CoA.

CATALYTIC ACTIVITY: ATP + biotin-carboxyl-carrier protein + CO(2) = ADP + phosphate + carboxyblotin-carboxyl-carrier protein. -!- COFACTOR: Biotin. -!- ENZYME REGULATION: By phosphorylation. -!- PATHWAY: Long-chain fatty acid biosynthesis; first (rate-limiting) -!- PTM: The N-terminus is blocked.
-!- SIMILARITY: Contains 1 ATP-grasp domain.
-!- SIMILARITY: Contains 1 biotin carboxylation domain.
-!- SIMILARITY: Contains 1 biotinyl-binding domain.
-!- SIMILARITY: Contains 1 carboxyltransferase domain. Event=Alternative splicing; Named isoforms=2; sold=P11497-2; Sequence=VSP\_011753; IsoId=P11497-1; Sequence=Displayed; step.
-!- SUBCELLULAR LOCATION: Cytoplasmic.

                          UNGELLULAR LOCATION: Cytoplasmic.
TISSUE SPECIFICITY: Expressed in brain, placental, skeletal muscle, renal, pancreatic and adipose tissues; expressed at level in pulmonary tissue; not detected in the liver. SIMILARITY: Contains 1 ATP-grasp domain.
SIMILARITY: Contains 1 biotinyl-binding domain.
SIMILARITY: Contains 1 biotinyl-binding domain.
SIMILARITY: Contains 1 biotinyl-binding domain.

"Primary structure of the biotin-binding site of chicken liver acetyl"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ENZYME REGULATION: By phosphorylation.
PATHWAY: Long-chain fatty acid biosynthesis; first (rate-limiting)

    + malonyl-CoA.
    CATALYTIC ACTIVITY: ATP + biotin-carboxyl-carrier protein + CO(2)
    = ADP + phosphate + carboxybiotin-carboxyl-carrier protein.
    COFACTOR! Blotin.

                                                                                                                                                                           Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

This protein carries three functions: biotin carboxyl carrier protein, biotin carboxylase, and carboxyltransferase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             15-JUL-1998 (Rel. 36, Last sequence update)

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not
COFACTOR: Biotin.
ENZYME REGULATION: By phosphorylation (By similarity).
PATHWAY: Long-chain fatty acid biosynthesis, first (rate-limiting)
                                                                                                                                                            ADP + phosphate + carboxybiotin-carboxyl-carrier protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                By similarity.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                   2907
